- Click to start program. The phrase you have to write will be read to you.
- Each word that you have to write next in phrase will be read to you before you start the word.
- First select the row (by clicking) and then the column in which your letter occurs.
- If a word was selected successfully it will say "you have written...".
- Click on "**delete**" button to delete a character.
- If you clicked on twice as many characters as the word length you're busy with, a **time-out error** will occur and you will be prompted to move on to the next word. Delete does not contribute to a time-out error.
- Wait for **2** alphabet-sequence repetitions to hear the **current letter number**. For example, it will say "second" if you're busy with the second letter of any word.
- Wait for **4** alphabet repetitions to **undo erroneous row selection**. It will say "new word ..."
- When you are confused about which word you have to write, write "**_**" to go to the next word. (All words end of with a "_" except for ".").
